

EXSELEN® OVERVIEW

- eXselen® is a pure, all-natural, organic, high selenium yeast product created for maximum bioavailability.
- The yeast inoculum used in the manufacturing of eXselen produces very high levels of selenomethionine, an organic form of selenium that rapidly metabolizes within the body to yield high bioavailability and retention.
- Independent research indicates that eXselen elevates selenium content in muscle tissue, liver tissue and blood serum more efficiently than other competitive selenium yeasts.*
- The selenium used in eXselen carries a qualified health claim allowed by the Food and Drug Administration (FDA):

“Selenium may reduce the risk of certain cancers. Some scientific evidence suggests that consumption of selenium may reduce the risk of certain forms of cancer. However, FDA has determined that this evidence is limited and not conclusive.”
- When ingesting 55 mcg of eXselen the body will absorb close to 55 mcg. With a less bioavailable form of selenium, of the 55 mcg ingested perhaps only 25 mcg will be absorbed into the body.*
- The yeast used in the manufacturing of eXselen contains beneficial B vitamins and glucans; is not a pathogenic yeast and does not cause Candida or other yeast-related problems.
